Education

FAST NUCES, Bachelors in Computer Science

August 2022 – Present

- **Electives:** Fundamentals of Accounting, Deep Learning for Perception, Enterprise Software Development, Recommender Systems, DevOps

Experience

Disrupt.com | Android Intern

March 2026 – Present

- Diagnosed and resolved a critical edge-case bug impacting recurring subscription payments, restoring successful transactions for affected users and preventing revenue leakage.
- Implementation of new product features by building reusable bottom sheet components and integrating SDK functionalities, improving development velocity and feature consistency across the app.
- Elevated codebase reliability and maintainability by increasing unit test coverage from 61% to 75% (JUnit4), strengthening exception handling, and introducing structured technical documentation.
- Refactored legacy Android components to optimize performance and stability, reducing runtime issues and improving overall application responsiveness.

Bridges of Hopes | Android Intern

June 2025 – October 2025

- Designed and developed key application pages, contributing directly to a smoother end-to-end user journey.
- Ensured seamless cross-device responsiveness, enabling consistent experience across mobile, tablet
- Identified and resolved critical issues in AI model pipelines, improving accuracy

Projects

Mezbaan | **Spring Boot**, **PostgreSQL**, **JWT**, **Redis**

github.com/Mezbaan

- Designed and developed a backend-driven event management platform, enabling seamless coordination of venue bookings, decoration management, and catering services through a unified system.
- Built and integrated **RESTful APIs** using **Spring Boot**, ensuring scalable backend architecture and reliable communication between client and server.
- Implemented secure **JWT-based authentication**, strengthening access control and safeguarding user data.
- Optimized backend performance by leveraging **Redis caching**, reducing database load and improving API response times by up to 40%.

Court Reserve | **Spring Boot**, **PostgreSQL**, **JWT**, **Redis**

github.com/Court-Reserve

- Designed and implemented **RESTful APIs** for user, vendor, court, booking, matchmaking, and tournament management using **Spring Boot**, enabling reliable CRUD operations and transactional workflows.
- Secured backend services with **JWT-based authentication** and **role-based access control (RBAC)**, along with input validation and transactional boundaries to ensure data integrity and prevent inconsistent system states.
- Optimized performance by integrating **Redis caching** for read-heavy endpoints, significantly reducing database load and improving API response times.

Certifications And Awards

- **Dean's Honour List:** Fall 2025
- **DB Project:** Mezbaan selected for Dev Expo @ Fast

Technologies

Languages: Java, Kotlin, Python C++ , C

Technologies: Spring Boot, Android - Jetpack Compose, Flask

Tools: Android Studio, IntelliJ IDEA, Docker, Redis, VS Code, Git, Ubuntu
